

The "Loi pour la Liberté de choisir son avenir professionnel" introduced the concept of a "gender pay equality index" for companies based in France. This index is made up of 4 indicators that make it possible to calculate a "score" between 0 and 100. All companies with 50 or more employees in France must publish this index. The aim is to enable the company to measure its performance in terms of professional equality at any given moment and to compare it from one year to the next, using a fixed calculation method common to all companies.

In France, from 01/01/2023 au 31/12/2023

122 Employees*

75 Women (61%)

47 Men (39%)

89/100

National average for 2023 for the "Specialist, scientific and technical activities" sector: 87**.

In France, over the previous period, from 01/01/2022 to 31/12/2022
